Outcomes Measurement
Focus Group

Focus groups often provide qualitative rather than quantitative information. Since the goal of the focus group is to determine the impact of the educational initiative on practice, please guide discussion to cover the questions below:

- **What changes to practice have learners been able to make since attending this educational activity?** Please provide examples.

- **Do learners feel that they have seen a change in their own competence and/or performance since participating in this activity?** Please provide examples.

- **Have learners been able to identify any change in patient outcomes since participating in this activity?** Please provide examples.

- **Did learners encounter difficulty when attempting to implement or apply newly gained knowledge/skills/procedures to practice?** Please provide examples.

Please submit a written summary of the Focus Group discussion to TUSM OCE.
